New Hard Pack Background

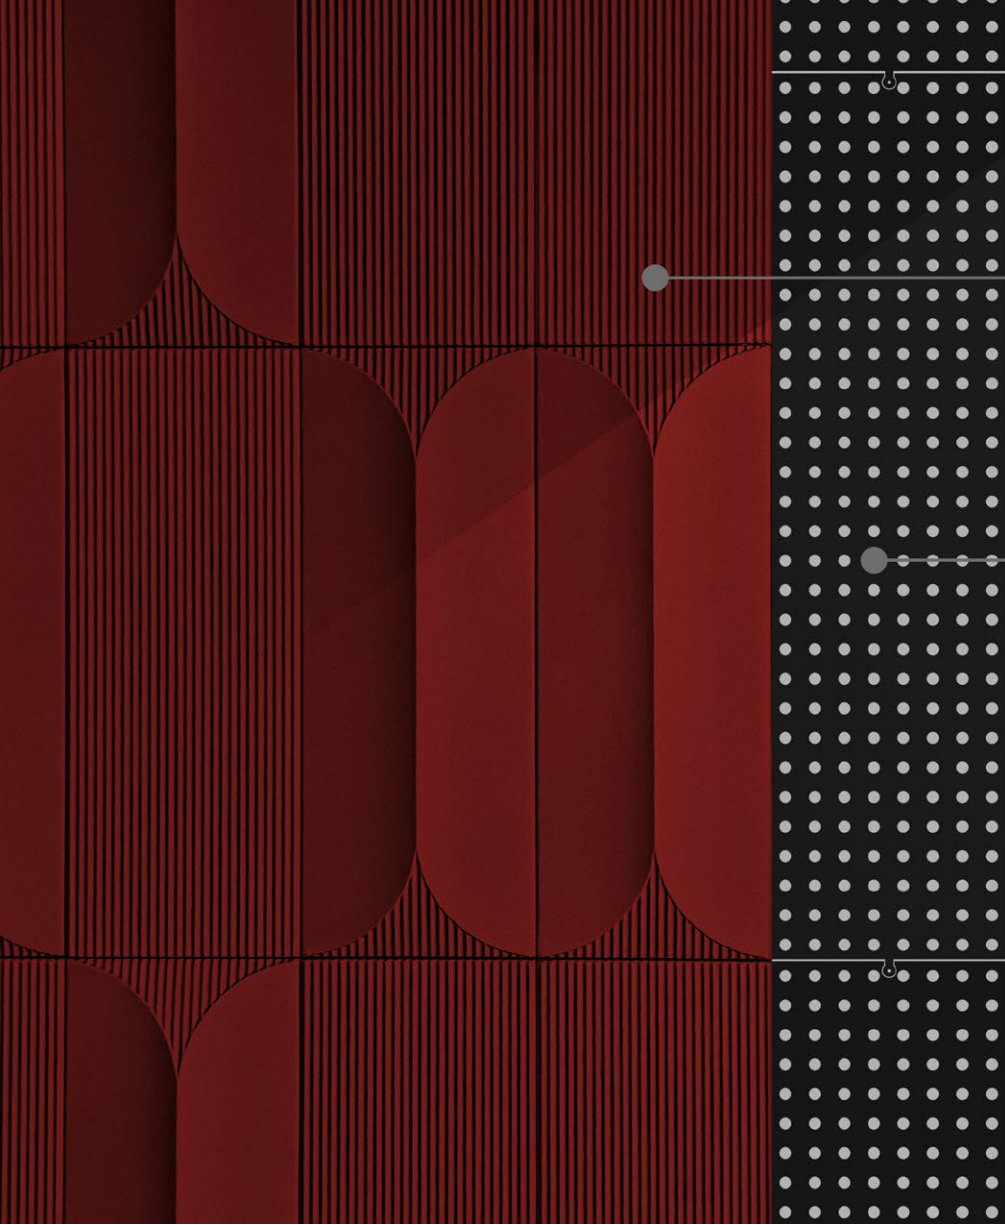

PRODUCT INTRODUCTION

The new hard-pack background wall is built using new technologies and new processes. Compared with traditional hard-pack, it is healthier and more environmentally friendly. It releases zero formaldehyde. In addition to its advantages of being moisture-proof and non-deforming, the modular design makes installation more convenient and accurate. The product has various shapes and delicate surface texture. Various modules can be freely spliced to support customization.

surface material	High-end customized leather (PU, microfiber)
base material	ABS particle engineering materials
thickness	≥1.5cm
Product features	Environmentally friendly, zero formaldehyde, noise reduction, moisture-resistant, and pollution-resistant
Fireproof	B2 level, B1 can be customized
Applicable environment	Various types of home, commercial and office spaces

Module Modularity

An artistic background wall is assembled from several modules to create a variety of module shapes and nearly a hundred fabrics to choose from.

Efficient environmentally friendly quick installation

Install the matching hole base, and the buckles on the back of the module can be clicked in accordingly. Patented technology is detachable and replaceable, as simple as Lego bricks.

The children's space gives priority to safety and environmental protection when selecting materials. The 3D art leather tiles have been tested for zero formaldehyde and do not need to use any adhesive during the installation process. It can truly be installed and moved in immediately.

The fabric is high-end PU solvent-free leather, which is soft and comfortable to the touch. The simple three-dimensional shape makes the space more childlike.

New hard package background wall installation method

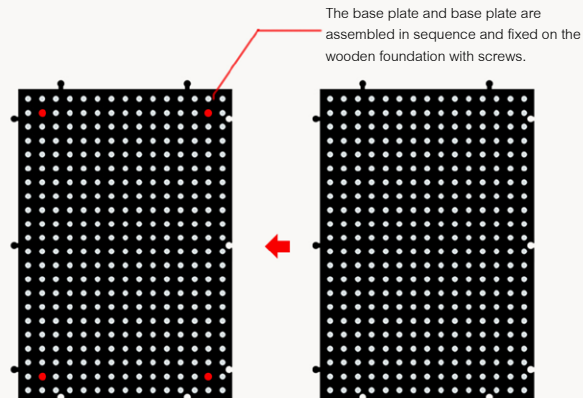

Three types of installation methods

INSTALLATION METHOD

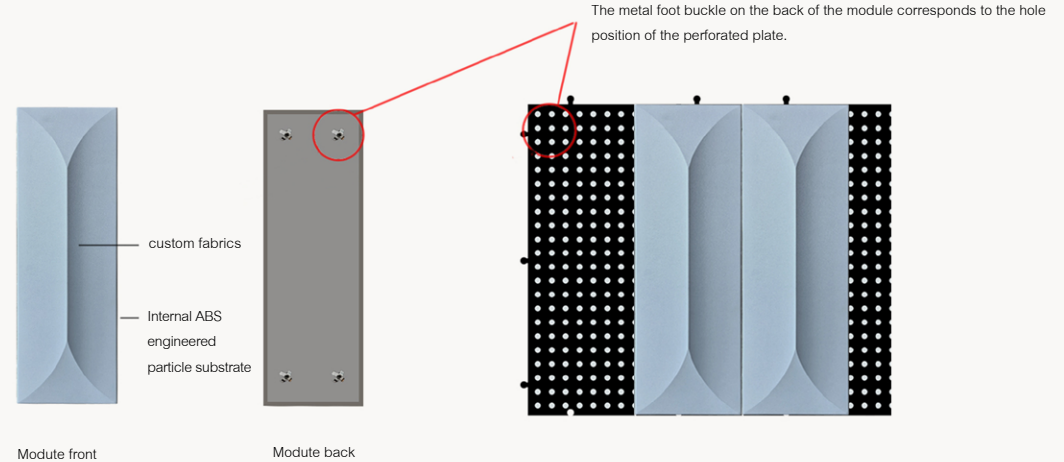

The new hard-packed background wall provides a variety of installation methods to suit the needs of different types of customers and projects.

● Patented installation method of base plate + buckle

1. Install the base perforated plate on the base plate, fix it with screws, and there are connection points between the base perforated plates.

2. Remove the connection points between the base perforated panels.
3. The panel is snapped into the base perforated plate and the installation is completed.

ADVANTAGE:

- a. It can be installed and disassembled, and can be used repeatedly. If it is damaged later, it can be easily replaced individually.
- b. The installation is accurate and the physical fixing method is firm and reliable;
- c. Scientific and environmentally friendly, there is no adhesive in the entire process from product to installation, and you can move in immediately after installation.

Suitable for home decoration and high-end commercial spaces.

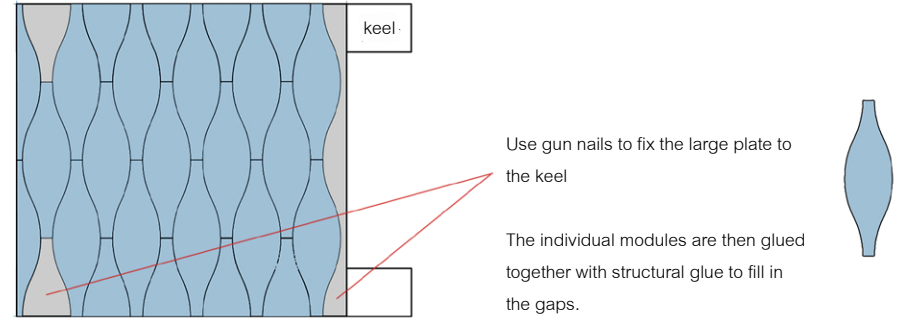

● Quick installation method of structural glue + large plate fixation

INSTALLATION METHOD

The back of the new hard-packed module is made of ABS engineering particle material, which can be easily fixed to the wall using structural adhesive. It is similar to floor and ceramic tile installation and can be cut at will without burrs.

For modules with smaller specifications, large boards that have been glued are provided and can be directly nailed to the keel or fixed to the wall with structural glue.

ADVANTAGE:

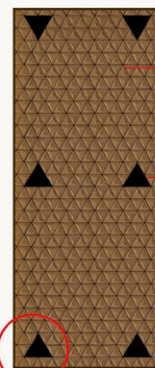

- a. Economical cost and convenient transportation.
- b. The workers are familiar with the operation, and the installation is convenient and efficient.
- c. There are no big requirements for the base layer. It can be installed if the wall is flat.

● Finished decorative background wall

INSTALLATION METHOD

Some products provide finished decorative background walls. The entire background wall is divided into several wall panels, which can be fixed to the wall with screws.

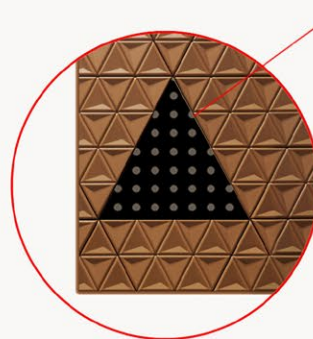

The surface layer of the finished decorative wall panel is 3D art leather tiles. It has been installed and the base material becomes the basic wooden board.

Reserve the installation position and fix the background wall to the wall with screws. Fixed embedded module

The edge is made of fabric of the same color wrapped with aluminum alloy profiles

Drill screws into the wall for fixation

The buckle on the back can correspond to the hole position
